## 2. CONNECTOR FUNCTION DESCRIPTION

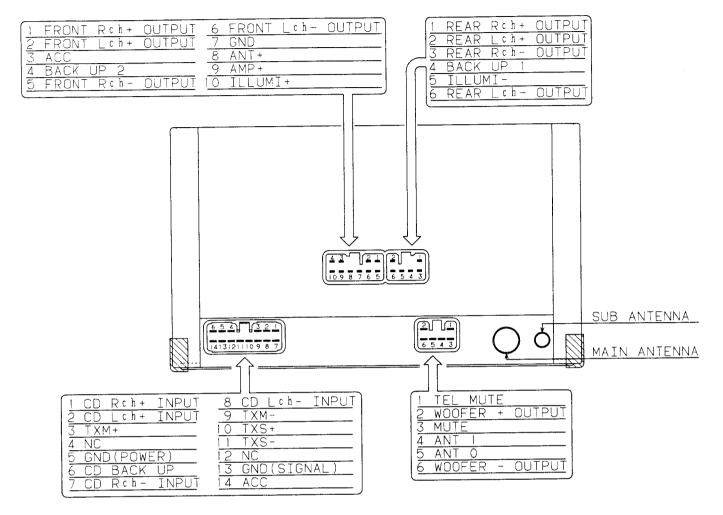

Fig. 1

## 3. DISASSEMBLY

## • Removing the Cover

- 1. Insert and turn a flat screwdriver to remove the cover.
- 2. Raise the cover to remove.

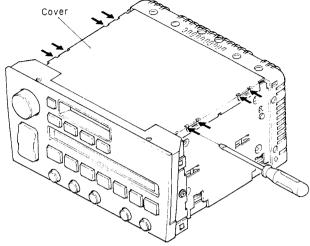

Fig. 2

## • Removing the Cassette Mechanism Assy

- 1. Remove the four screws, and then remove the holder.
- 2. Disconnect the connector, and then raise the cassette mechanism assy.

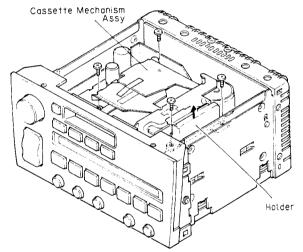

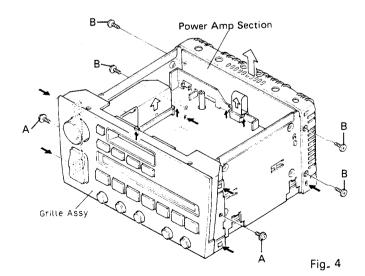

Fig. 3

## • Removing the Grille Assy

- Disconnect the connector, and then remove the two screws A.
- 2. Disengage the stopper at four locations indicated by arrows.

## • Removing the Power Amp Section

- 1. Remove the four screws B.
- 2. Disengage the stopper at two locations indicated by
- 3. Raise the power amp P.C. board.

#### • Removing the Control Unit

- 1. Disconnect the two connectors.
- 2. Remove the four screws.
- 3. Remove the control unit.

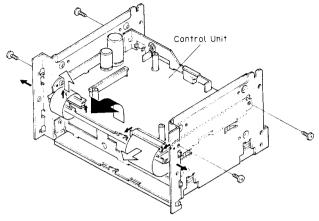

Fig. 5

#### • Removing the Heat Sink

- 1. Remove the screw C and four screws D.
- 2. Remove the heat sink.

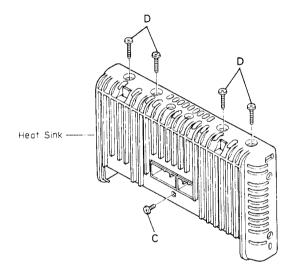

Fig. 6

## Removing the Communication Unit (KEH-M9741ZT, KEH-M9741ZT-02)

- 1. Disconnect the two connectors.
- 2. Remove the three screws, and then remove the communication unit.

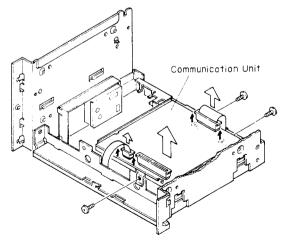

Fig. 7

#### • Removing the Tuner P.C. Board

- 1. Remove the two screws, and then remove the side panels.
- 2. Remove the solder at location indicated by arrow.
- 3. Straighten the claw, and then remove the tuner P.C. board.

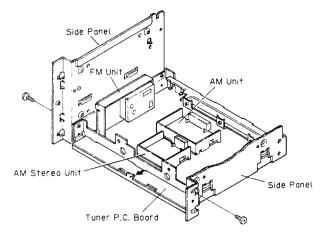

Fig. 8

## Removing the FM Unit, AM Unit and FM Stereo Unit

- 1. Remove the solder at location indicated by arrows.
- 2. Straighten the claws.
- 3. Remove the each units.

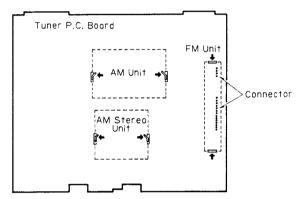

Fig. 9

## Removing the Key Board Unit, Volume P.C. Board A and Volume P.C. Board B

- 1. Disconnect the two connectors.
- 2. Remove the twelve screws.
- 3. Remove the each units.

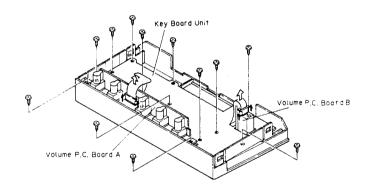

Fig. 10

## 4. ANTI-THEFT SECURITY SYSTEM

#### 4.1 HOW TO INPUT THE THREE DIGIT SECURITY SYSTEM CODE

#### 1. ACCESS MODE

First...

BE SURE THAT:

- · the radio unit is turned off
- the ignition switch is in "ACC"

Then...

HOLD the "1 [REW]" and "6 [D]]" buttons, and simultaneously PUSH and HOLD the "POWER. VOL" knob in, until "SEC" appears, then release buttons.

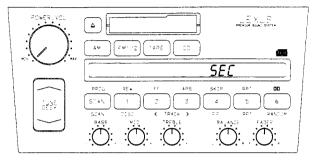

Fig. 11

#### 2. READY MODE

PRESS and HOLD the "TUNE [  $\land$  ]" button in and PRESS the "1 [REW]" button. The display will read " $\blacklozenge$  ——".

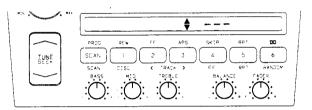

Fig. 12

#### 3. INPUT MODE

Note: User has up to ten seconds to input each digit.

Now you're ready to input a three digit Identification Number.

To set the first ID digit:

 PRESS "1 [REW]" repeatedly until the desired number appears on the display

To set the second ID digit:

PRESS "2 [FF]" repeatedly until the desired number appears on the display

To set the third ID digit:

PRESS "3 [APS]" repeatedly until the final desired number appears on the display

**EXAMPLE:** If the desired ID number is 314, you'd press "1 [REW]" four times, press "2 [FF]" twice, and press "3 [APS]" five times. (Code digits range zero through nine.)

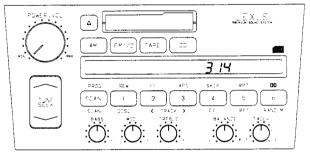

Fig. 13

#### 4. SET MODE

With the ID number now appearing on the display:

 PRESS the "SCAN [PROG]" button and HOLD it in until "SEC" appears for a few seconds, then it will GO DARK.

NOTE: 1) CREATE AN ID NUMBER EASY TO REMEMBER

- 2) KEEP ID NUMBER IN A RELIABLE PLACE
- 3) DON'T LEAVE ID NUMBER IN THE VEHICLE!

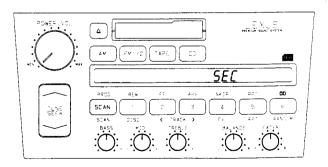

Fig. 14

## 4.2 HOW TO CHANGE THE THREE DIGIT SECURITY SYSTEM CODE

#### 1. ACCESS MODE

First...

BE SURE THAT:

- the radio unit is turned off
- the ignition switch is in "ACC"

Then...

HOLD the "1 [REW]" and "6 [][]" buttons, and simultaneously PUSH and HOLD the "POWER. VOL" knob in, until "SEC" appears, then release buttons.

#### 2. READY MODE

PRESS and HOLD the "TUNE [  $\wedge$  ]" button in and PRESS the "1 [REW]" button. The display will read "♦ ----".

#### 3. INPUT MODE

Input existing three digit ID numbers.

#### 4. SET MODE

Then, push "SCAN [PROG]." The display will now read "---" continuously.

\* ("ERR" See "ERROR MESSAGE")

#### 5. READY MODE

PUSH "TUNE [  $\land$  ]" and "1 [REW]" simultaneously. The display will read "  $\blacklozenge$  ——".

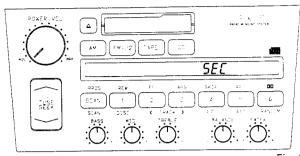

#### 6. INPUT MODE

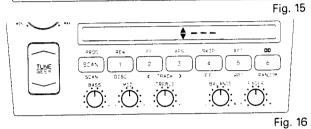

Now you're ready to input a new three digit Identification Number.

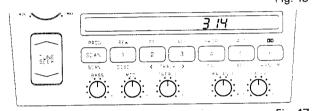

#### 7. SET MODE

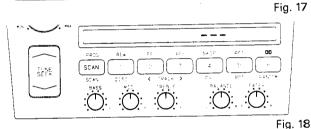

With the ID number now appearing on the display:

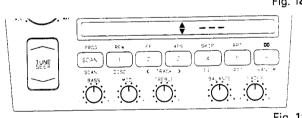

PRESS the "SCAN [PROG]" button and HOLD it in until "SEC" appears for a few seconds, then it will GO DARK.

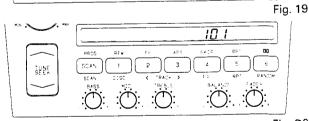

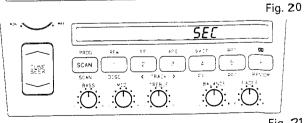

Fig. 21

#### 4.3 HOW TO CLEAR THE SECURITY CODE

#### 1. ACCESS MODE

First...

BE SURE THAT:

- · the radio unit is turned off
- the ignition switch is in "ACC"

Then...

HOLD the "1 [REW]" and "6 [D]]" buttons, and simultaneously PUSH and HOLD the "POWER. VOL" knob in, until "SEC" appears, then release buttons.

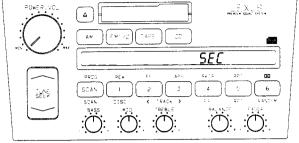

Fig. 22

#### 2. READY MODE

PRESS and HOLD the "TUNE [  $\land$  ]" button in and PRESS the "1 [REW]" button. The display will read "  $\blacklozenge$  ---".

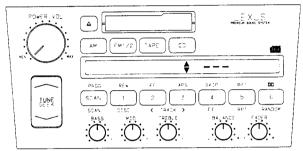

Fig. 23

#### 3. INPUT MODE

Input existing three digit ID numbers.

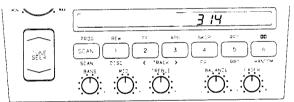

Fig. 24

#### 4. SET MODE

Then, push "SCAN [PROG]." The display will now read "——" continuously.

\* ("ERR" See "ERROR MESSAGE")

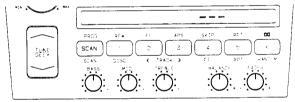

Fig. 25

- WAIT for ten seconds. The security system clears itself and the display will GO DARK.
  - \* (The security code should be cleared when the vehicle is resold.)

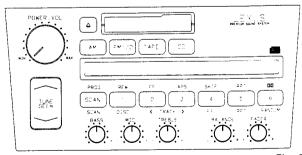

Fig. 26

#### 4.4 HOW TO REACTIVATE A DISABLED ETR

1. If the power is disconnected by an attempted theft or loss of battery power, the display will read "SEC" continuously when the key is "on." Also, when the ignition key is turned to ACC, none of the ETR functions will function.

#### 2. READY MODE

PRESS and HOLD the "TUNE [  $\land$  ]" button in and PRESS the "1 [REW]" button. The display will read "  $\blacklozenge$  ---".

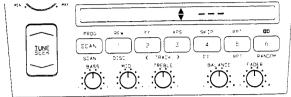

Fig. 27

#### 3. INPUT MODE

Now you're ready to input the existing three digit Identification Number.

To set the first ID digit:

 PRESS "1 [REW]" repeatedly until the desired number appears on the display

To set the second ID digit:

PRESS "2 [FF]" repeatedly until the desired number appears on the display

To set the third ID digit:

PRESS "3 [APS]" repeatedly until the final desired number appears on the display

**EXAMPLE:** If the desired ID number is 314, you'd press "1 [REW]" four times, press "2 [FF]" twice, and press "3 [APS]" five times. (Code digits range zero through nine.)

Note: User has up to ten seconds to input each digit.

With the ID number now appearing on the display:

 PRESS the "SCAN [PROG]" button and HOLD it in until "SEC" appears for a few seconds, then it will GO DARK.

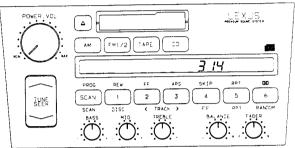

Fig. 28

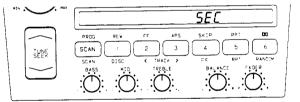

Fig. 29

#### **ERROR MESSAGE**

If the wrong buttons are pushed, "Err" will appear before "SEC" appears. Go back to Step 2 and try again. Or, if the display returns to "♣ ----" during your input, try again from Step 3. BUT:

**BE CAREFUL!** On the fifth wrong input, the ETR unit goes dead and must be reactivated by an authorized service station

TO VERIFY that the ID number has been accepted as the security code, turn the key "off," then turn it back on, "SEC" should appear. Once the anti-theft system is properly set, "SEC" will appear on the display each time the ignition key is turned to "ACC" after being off.

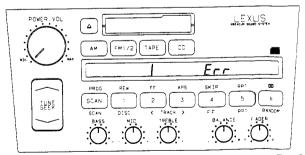

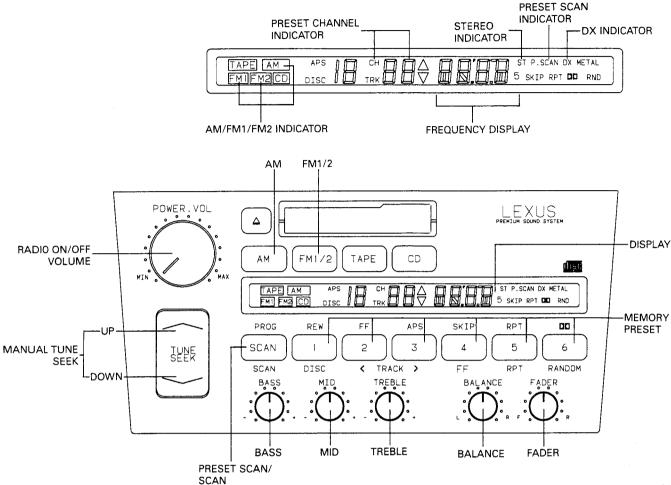

Fig. 30

#### 5. GENERAL GUIDE

#### 5.1 RADIO

#### Fig. 31

#### • Manual/Seek Tuning:

When the  $\land$  (up) side of the TUNE button is pressed, the frequency is increased by 2 MHz in the FM band and by 10 kHz in the AM band, and when the v (down) side is pressed, the frequency is decreased in the same way. Holding the button depressed for more than 0.5 seconds starts seek tuning, which stops when a station broadcasting a sufficiently strong signal is received.

When only weak signals or no station is received, the frequency returns to the initial frequency, then the reception is changed to the DX mode.

#### Memory Preset:

- Select the required band among the FM1, FM2, and AM bands.
- (2) Tune to the broadcast station required to be stored in memory.
- (3) Press and hold one of the Memory Preset button for about 2 seconds.

- (4) A beep tone will be heard when the tuned station is stored in the memory corresponding to the Memory Preset button pressed.
- (5) Up to six stations can be memorized for each of the FM1, FM2 and AM bands.

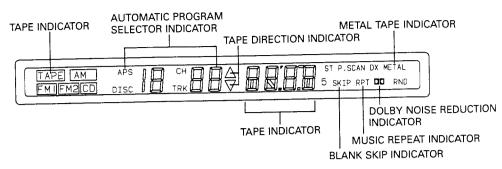

#### Preset Scan/Scan Tuning:

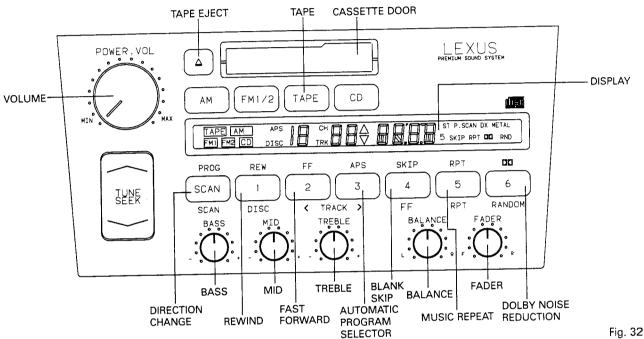

When the SCAN button is pressed, all the stations stored in the Memory Preset buttons will be received for 5 seconds in sequence.

When the SCAN button is held pressed for more than 2 seconds, the Scan Tuning mode is activated and station broadcasting strong signals will be received for 5 seconds in sequence. When the tuning returns to the frequency from which the Scan Tuning was started, the receiving mode is changed to the DX mode.

To release Preset Scan or Scan Tuning, press the SCAN button again.

#### **5.2 TAPE**

## Rewind/Fast Forward:

Press the REW (or FF) button to rewind (fast-forward) the tape, and press it again to release the function.

#### • APS:

With the APS button, the beginning of any required tune up to 9 tunes before and after the current tune can be detected automatically. After pressing the APS button the number of times corresponding to the number of the tune to which you want to skip (for three times to select the 3rd tune), press the FF button to search in the forward direction or press the REW button to search in the reverse direction. The tape will stop at the beginning of the designated tune and play starts automatically.

#### (For example)

When the FF button is pressed after pressing the APS button three times, the tape is fast-forward by skipping two tunes in the forward direction, and play will start from the beginning of the 3rd tune.

#### • Blank Skip:

With the SKIP button pressed ON, when a blank (non-recorded) section of more than 15 seconds is detected, the tape is fast-forwarded to the beginning of the next tune. When the SKIP button is pressed again, the Blank Skip function is released.

#### • Music Repeat:

With the RPT button pressed ON, when the current tune is finished, the tape will be rewound to the beginning of the tune and play will restart automatically. When the RPT button is pressed again, the Music Repeat function is released.

#### Dolby Noise Reduction\*

Press this button when using a tape recorded with the Dolby (B type) Noise Reduction system. Press the button again to release it.

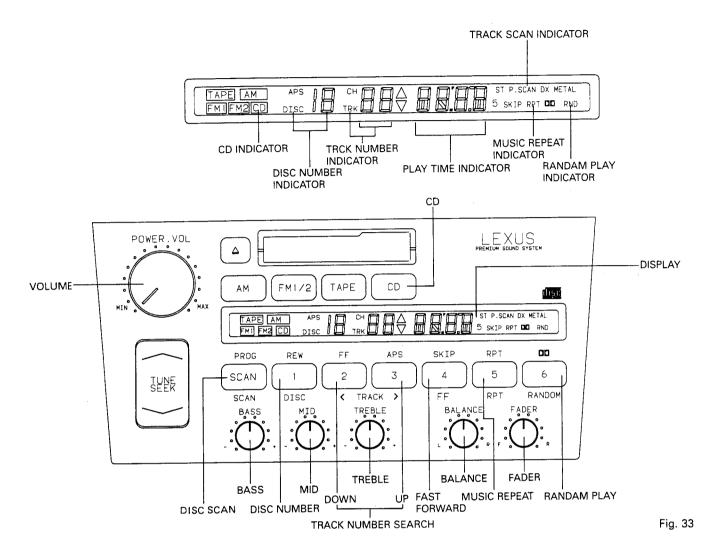

\* Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation.

Dolby and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

#### • Ejecting Tape:

The tape can be ejected at any time by pushing the TAPE EJECT button.

#### 5.3 CD

#### Changing the Discs:

When the DISC button is pressed, the disc number is counted up, and the disc designated by the DISC button will be played. When the DISC button is held pressed for more than 0.5 seconds, the disc number is counted up continuously. If a tray with no disc in the magazine loaded in the CD changer is selected, the corresponding disc number will not be displayed.

#### • Track Search:

When the TRACK < button is pressed, the track number is counted down and the designated track will be played. When the TRACK < button is held pressed for more than 0.5 seconds, the track number will be counted down continuously.

When the TRACK > button is pressed, the track number is counted up and the designated track will be played. When the TRACK > button is held pressed for more than 0.5 seconds, the track number will be counted up continuously.

#### • Fast Forward:

The playing position is fast-forwarded while the FF button is pressed. During fast-forwarding, playback sound can be heard.

#### • Music Repeat:

When the RPT button is pressed, the current track will be played repeatedly. Press the RPT button again to release the Music Repeat function.

#### Random Play:

When the RANDOM button is pressed, the track to be played next will be selected automatically by the built-in microcomputer.

#### Disc Scan:

When the SCAN button is pressed, the beginning of all the tracks on the discs loaded in the CD changer will be played for 10 seconds in sequence. When play returns to the disc from which Track Scan was started, Track Scan will be released. To release the Track Scan function during its operation, press the SCAN button again.

## 6. CIRCUIT DESCRIPTION

#### **6.1 DATA COMMUNICATIONS**

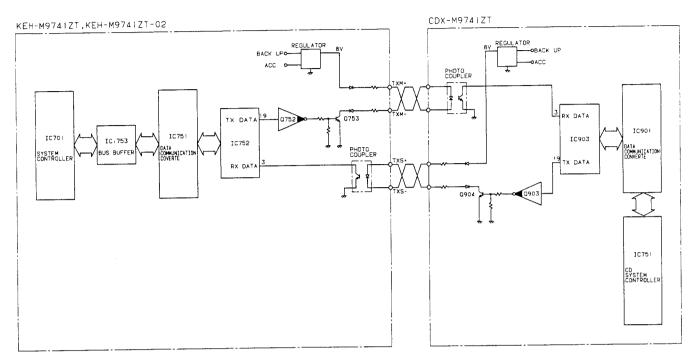

Fig. 34

## Communication Interface for Operation Control

1) Communication specifications

Synchronization:

Asynchronous

Baud rate:

4800 bps

Start bit length:

1 bit

Data bit length:

8 bit

Parity bit:

Even

Signal level:

ON +8 V, OFF 0 V

Communication method: Half-duplex

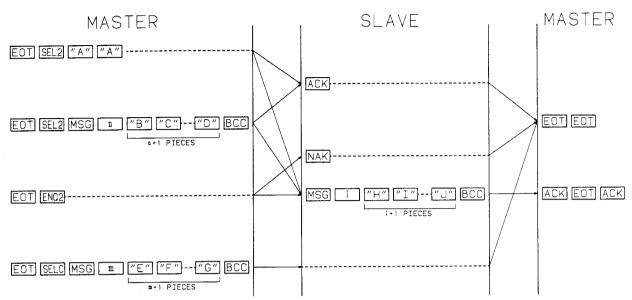

2) Transmission control system

Polling, system selection by master station

3) Signal terminal specifications

Pin name	Definition	Signal direction
① TXM +	: Master transmission power supply (+8 V)	Master → Slave
② TXM -	: Master transmission output (open collector)	Master → Slave
③ TXS+	: Master receiving input (positive)	Master ← Slave
④ TXS-	: Master receiving input (negative)	Master ← Slave

#### Data Format

NOTE:

"A", "B",...."J":COMMAND, CONDITION, DATA OF INDICATION

BCC: ERROR CHECK

1,m,n:NUMBER OF DATA

THE OTHERS: COMMUNICATION CONTROL CODE

Fig. 35

#### • Communication Timing Chart

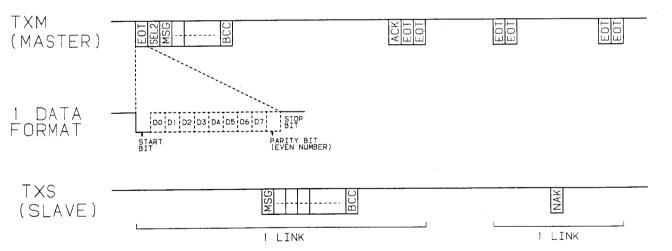

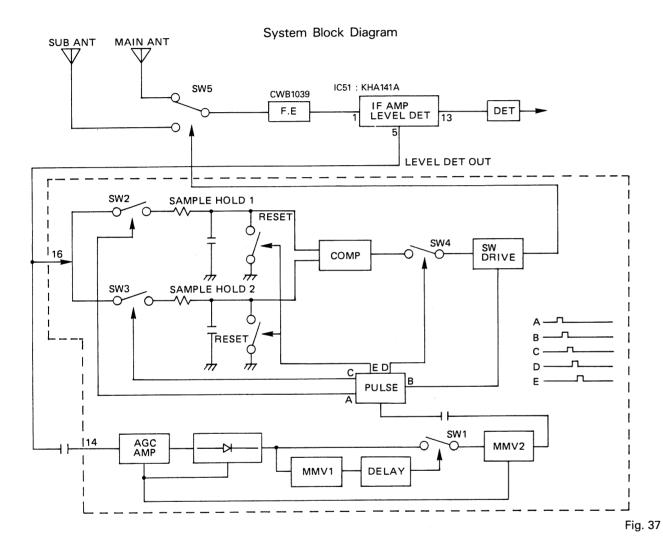

Fig. 36

#### 6.2 FM DIVERSITY SYSTEM

The system incorporates two antennas and one tuner. Noise elements in the signal meter voltage are detected, and whenever noise is present the levels of the two antennas are compared. The antenna with the higher level is selected.

Noise due to multipath distortion, etc. appears in the LEVEL DET OUT signal from pin 5 of IF IC KHA141A. The noise passes through a capacitor and is supplied to the AGC amplifier where it is amplified. Then it is rectified. This signal is then supplied to MMV1. After being delayed by approximately  $40-50~\mu \rm sec.$  in the next delay circuit, it closes SW1 for a few  $\mu \rm sec.$  (determined by MMV1). If new noise is generated while SW1 is closed, this noise is supplied to MMV2. After wave shaping, it is supplied to the pulse generation circuit.

The pulse generation circuit generates in sequence pulses A - E shown in the figure.

A is supplied to SW2, and sample and hold is performed on the ANT level for the signal being received at that point. B is supplied to SW DRIVE and the antenna is switched. C is supplied to SW3, and sample and hold is performed on the antenna input level after ANT was switched. D is supplied to SW4, closing it. The sample-and-hold 1 and 2 comparison output is sent to SW DRIVE.

At this point, if the ANT input level from before the switch is higher, ANT is switched back to the original antenna. If the ANT input level after the switch is higher, ANT remains connected to the current antenna. As described above, whenever noise is supplied to MMV2, the input levels of the two antennas are compared and the antenna with the higher level input is chosen.

#### **6.3 MOTOR ANTENNA CONTROL**

Radio Status	ANT (+)	ANT (0)	ANT (1)	ANTENNA POSITION
OFF	L	L	L	With antenna shortened
During cassette or CD play	L	L	L	"
During AM broadcast reception	Н	Н	Н	Long
During FM broadcast reception (87.9 – 96 MHz)	Н	Н	L	Medium
During FM broadcast reception (96.1 – 107.9 MHz)	Н	L	L	Short
During AM seek or scanning	Н	Н	Н	Long
During FM seek or scanning (Starts from 87.9 – 96 MHz)	Н	Н	L	Medium
During FM seek or scanning (Starts from 96.1 – 107.9 MHz)	Н	L	L	Short

#### **6.4 ELECTRONIC VOLUME**

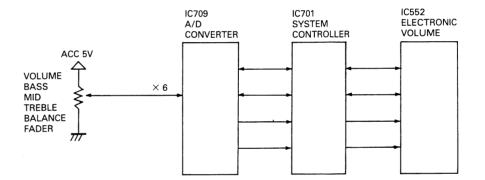

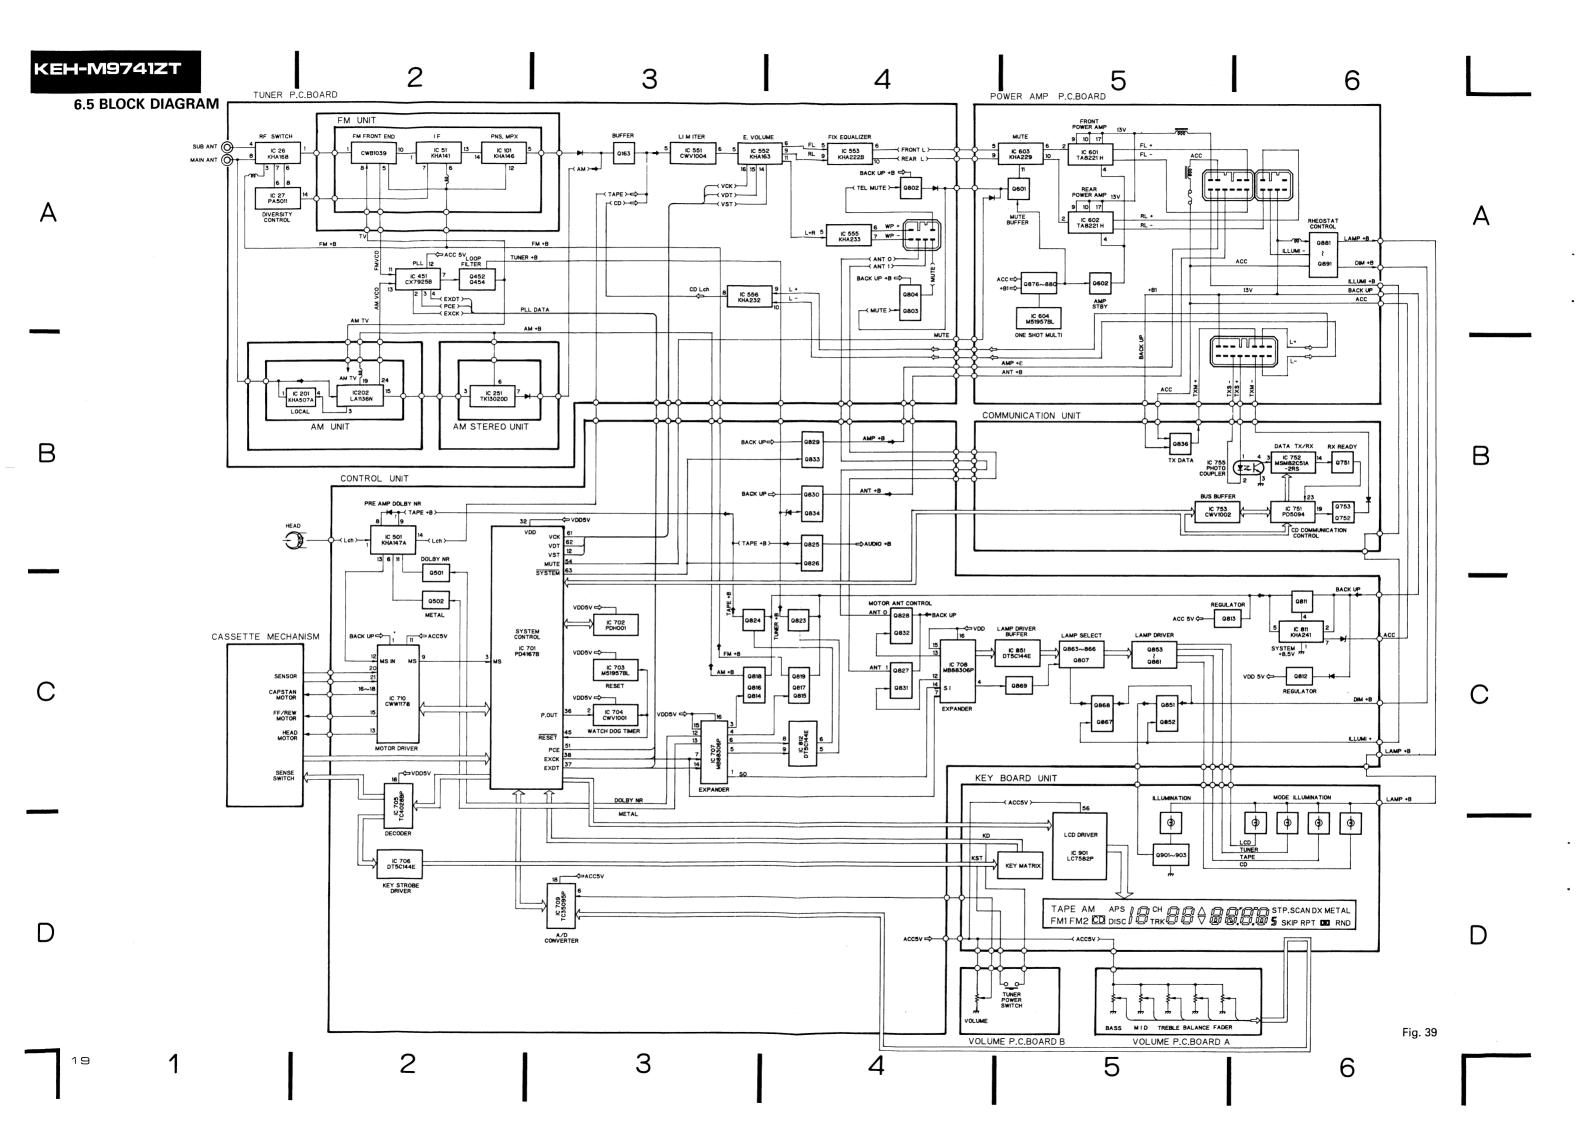

Fig. 38

In this unit, an electronic volume control circuit in IC552 is controlled by serial data. For operation of the electronic volume control circuit, the midpoint voltages of six variable resistors — VOLUME, BASS, MID, TREBLE, BALANCE and FADER — according to the rotation angles of the VRs are transmitted to IC709 in which analog signals are converted into digital signals. Then, the signal is converted into serial data in IC701, and applied to IC552 to be used for controlling the electronic volume control circuit in IC552.

## 8. ADJUSTMENT

#### **8.1 TEST MODE**

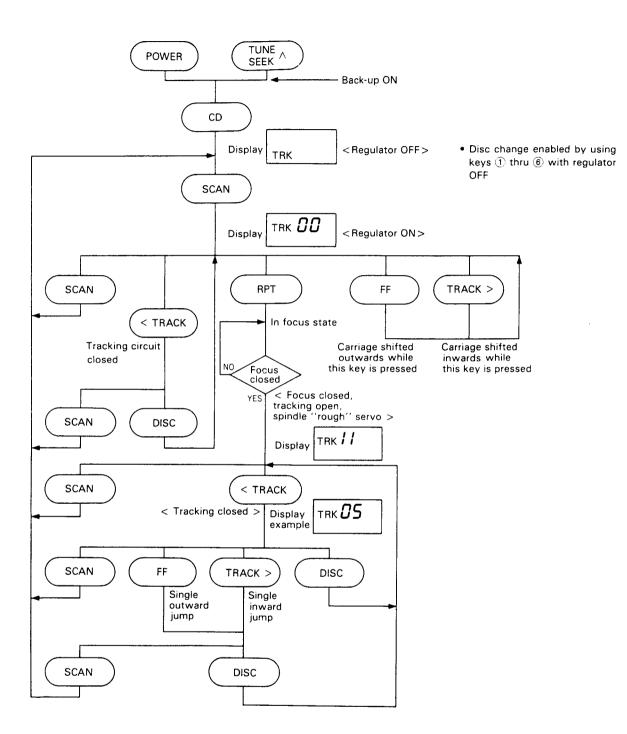

Test mode is mainly used in adjustment of CD multi-player CDX-M9741ZT

- Switching to test mode
   While pressing the POWER, TUNE keys together, switch
   the back-up ON.
- Canceling test mode Switch the CD multi-player back-up OFF.
- Key functions during test mode
   The CD multi-player is selected by the CD key.

#### a) CD multi-player

Key	Function
SCAN	DD converter ON/OFF
FF	FWD kick
TRACK >	REV kick
TRACK <	Tracking close
DISC	Tracking open
RPT	Focus close
RANDOM	Disc change

#### • Flow Chart

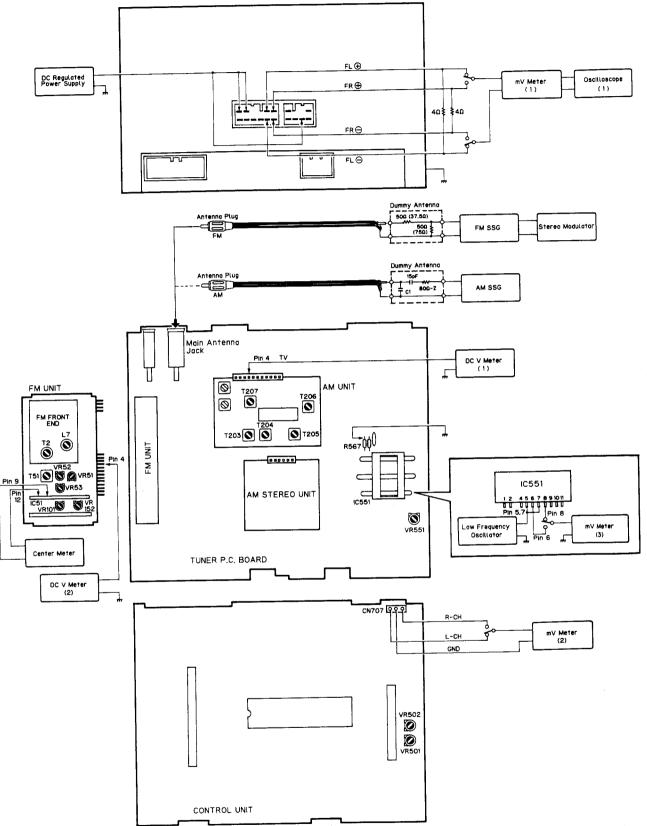

## **8.2 AUDIO/TUNER ADJUSTMENT**

#### NOTICE:

Select C1 so that total capacity of 80pF is attained from the direction of the receiver jack.

Z: Output impedance of SSG.

#### • ICs and Transistors

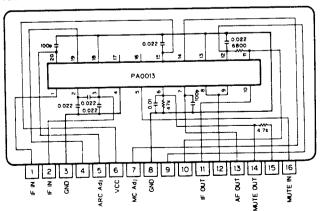

#### PA5011

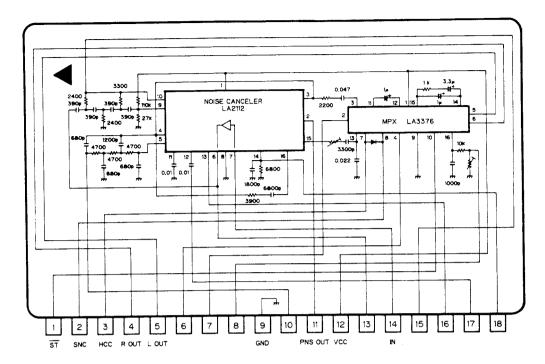

#### • Pin Functions (PA5011)

Pin No.	Pin Name	I/O	Functions and Operation
1	AGC1		Connected to gain control, noise amplifier AGC1 CR.
2	MM1		Connected to MMV1 output pulse width setting capacitor.
3	DLY		Connected to time delay setting capacitor.
4	GAIN		Connected to noise amplifier gain setting CR.
5	MM2		Connected to MMV2 output pulse width setting capacitor.
6	MAIN	0	"L" when the main antenna is selected.
7	GND		
8	SUB	0	"L" when the sub antenna is selected. Output phase is the opposite of that of the main antenna. Open corrector output.
9	LH1		Connected to level hold 1 capacitor.
10	VCC		
11	LH2		Connected to level hold 2 capacitor.
12	FIX	1	Auto mode when open. Fixed at main antenna when connected to GND. Fixed at sub antenna when connected to VCC.
13	TPG		Connected to timing pulse generation capacitor.
14	TIN	T	Noise amplifier input terminal. The tuner signal meter output signal passes through a capacitor and is input.
15	AGC2		Connected to noise amplifier AGC2 CR.
16	SIN	1	Level hold circuit input terminal. Tuner signal meter output signal is input.

Pin No.	Pin Name	1/0	Output Format	Function and Operation
32	VDD			Device power supply terminal
33	LINH	Output	С	Inhibit output pin for LCD driver(IC901)
34	LCE	Output	С	Chip enable output pin for LCD driver(IC901)
35	EXLD	Output	С	Data load output pin for expander(IC707, 708)
36	P. OUT	Output	С	Pulse output pin for watch dog timer(IC704)
37	EXDT	Output	С	Data output pin for external [C
38	EXCK	Output	С	Clock output pin for external IC
39	EXCE	Output	С	Chip enable pin for expander(IC707, 708)
40	RDSMT	Output	С	Not used
4.1	STD	Output	С	Mechanism switch, strobe output pins
44	STA			
45	RESET	Input		Reset input pin
46 47	1			Crystal oscillator connection pins
48	EDI	Input		Serial data output pin for EEPROM(1C702)
49	ECE	Output	С	Chip enable pin for EEPROM(IC702)
50	TX/RX	Output	С	Bus communication TX(Transmission)/RX(Reception) control output pin
51	PCE	Output	C	PLL IC(IC451) chip enable pin
52	BRST	Output	С	Bus communication reset output pin
53	BBUSY	Output	С	Bus communication busy output pin
54	MUTE	Output	С	System mute output pin
55	RDSINH	Output	С	Not used
56 57 58	I 1	Output	G	Data output pins for mechanism driver(IC710)
59	STBYI	Output	С	Standby output pin for mechanism driver(IC710)
60	CM	Output	С	Capstan motor ON/OFF control output pin
61	VCK	Output	С	Clock output pin for electronic volume(IC522)
62	VDT	Output	C	Data output pin for electronic volume(IC522)
63	SYSPW	Output	C	Power amplifier power ON/OFF control output pin

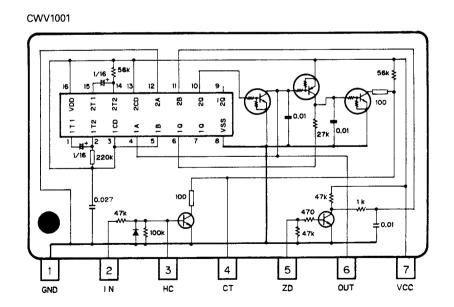

Pin No.	Pin Name	1/0	Output Format	Function and Operation
64	vss			GND terminal

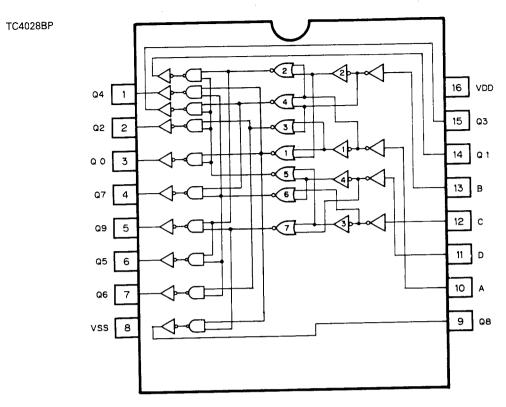

Output format	Meaning
N	N channel open drain
С	C-MOS

## • Pin Function (IC707 : MB88306P)

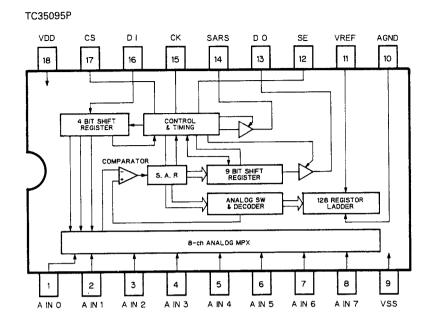

Pin No.	Pin Name	1/0	Output Format	Function and Operation
1	so	Output	С	Serial data output pin
2	LOAD	Input		Data load input pin
3	MWPW	Output	С	MW+B ON/OFF select output pin
4	FMPW	Output	С	FM+B ON/OFF select output pin
5	TUNPW	Output	O	Tuner+B ON/OFF select output pin
6	TAPPW	Output	С	Tape+B ON/OFF select output pin
7	EXCK	Input		Clock input pin
8	vss			GND terminal
9	EXCE	Input		Chip enable input pin
10	SW2PW	Output	U	SW2+B ON/OFF select output pin
1 1	SW1PW	Output	U	SW1+B ON/OFF select output pin
12	NR	Output	O	Dolby NR ON/OFF select output pin
13	METAL	Output	U	Tape METAL ON/OFF select output pin
14	EXDT	Input	С	Serial data output pin
15	RST	lnput		Reset input pin
16	VDD			Device power supply terminal

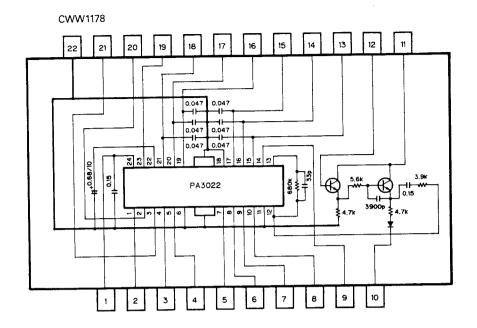

## • Pin Function (IC708 : MB88306P)

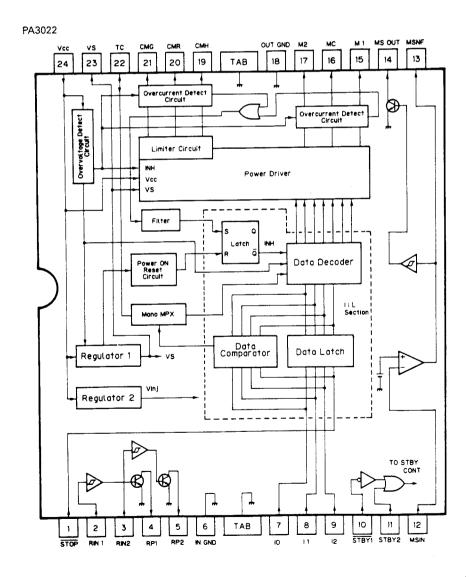

Pin No.	Pin Name	1/0	Output Format	Function and Operation
1	so	Output	C	Serial data output pin
2	LOAD	Input		Data load input pin
3	HAR	Output	U	Not used
4	LCD	Output	С	Lamp of LCD ON/OFF control output pin
5	TAPE	Output	C	Lamp of TAPE ON/OFF control output pin
6	TUN	Output	С	Lamp of TUNER ON/OFF control output pin
7	EXCK	Input		Clock input pin
8	vss			GND terminal
9	EXCE	Input		Chip enable input pin
10	CD	Output	С	Lamp of CD ON/OFF control output pin
1 1	PLAY	Output	С	Tape MS filter select output pin
12	ANT1	Output	С	ANT1 control output pin
13	ANTO	Output	С	ANTO control output pin
14	EXDT	Input	С	Serial data output pin
15	RST	Input		Reset input pin
16	VDD			Device power supply terminal

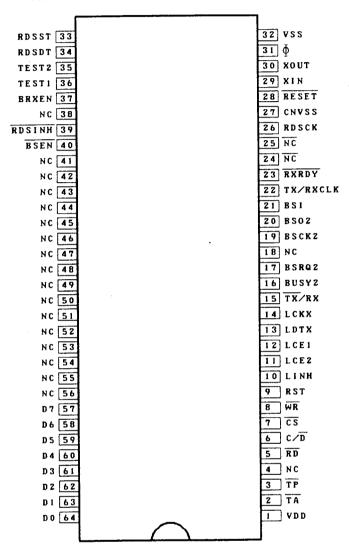

## • Pin Function (TC35095P)

Pin No.	Pin Name	1/0	Output Format	Function and Operation
1	N. C			Not used
2	N. C			Not used
3	BASS	Input		BASS level input terminal
4	TRE	Input		TREBLE level input terminal
5	FAD	Input		FADER level input terminal
6	MAIN	Input		VOLUME level input terminal
7	BAL	lnput		BALANCE level input terminal
8	MID	Input		MIDDLE level input terminal
9	vss			GND terminal
10	AG			Analog GND terminal
1 1	VREF	Input		Reference voltage input pin
12	SE	Input		Not used
13	DO	Output	С	Serial data output pin
14	SARS	Output	С	Status output pin
15	EXCK	Input		Serial clock input pin
16	EXDT	Input		Data input pin
17	ACE	Input		Chip enable input pin
18	VDD			Device power supply terminal

### • Parts List

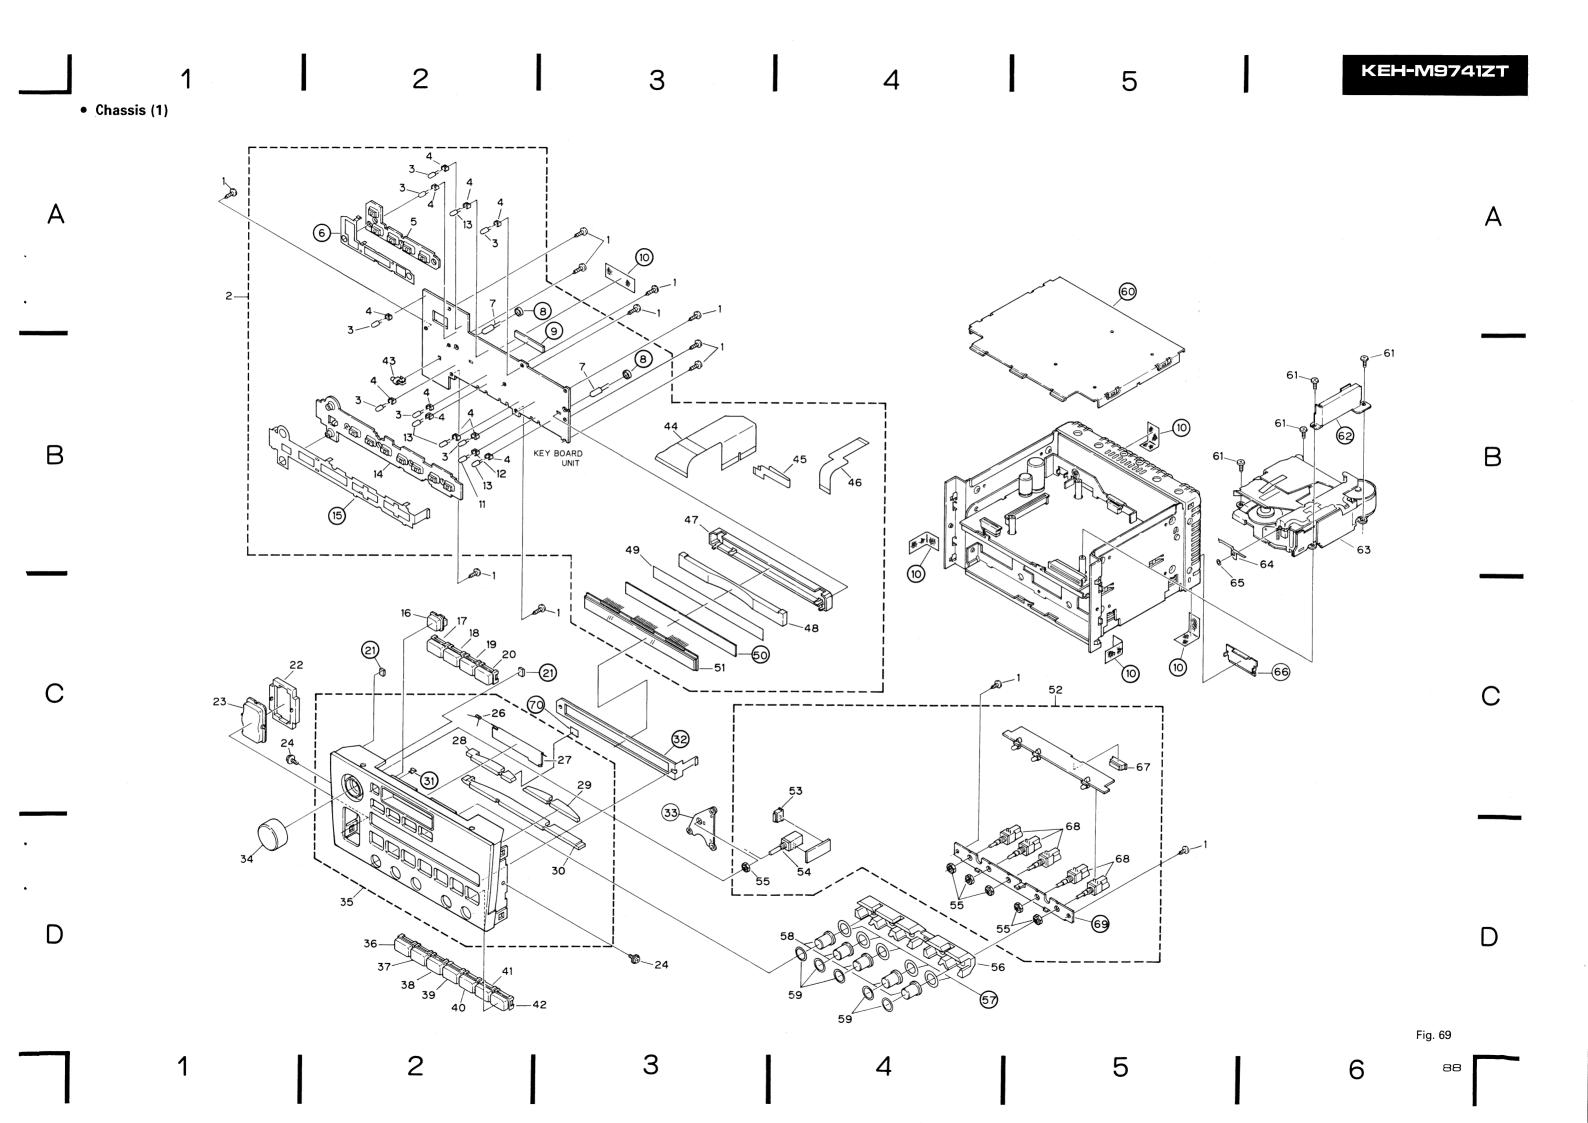

#### NOTE:

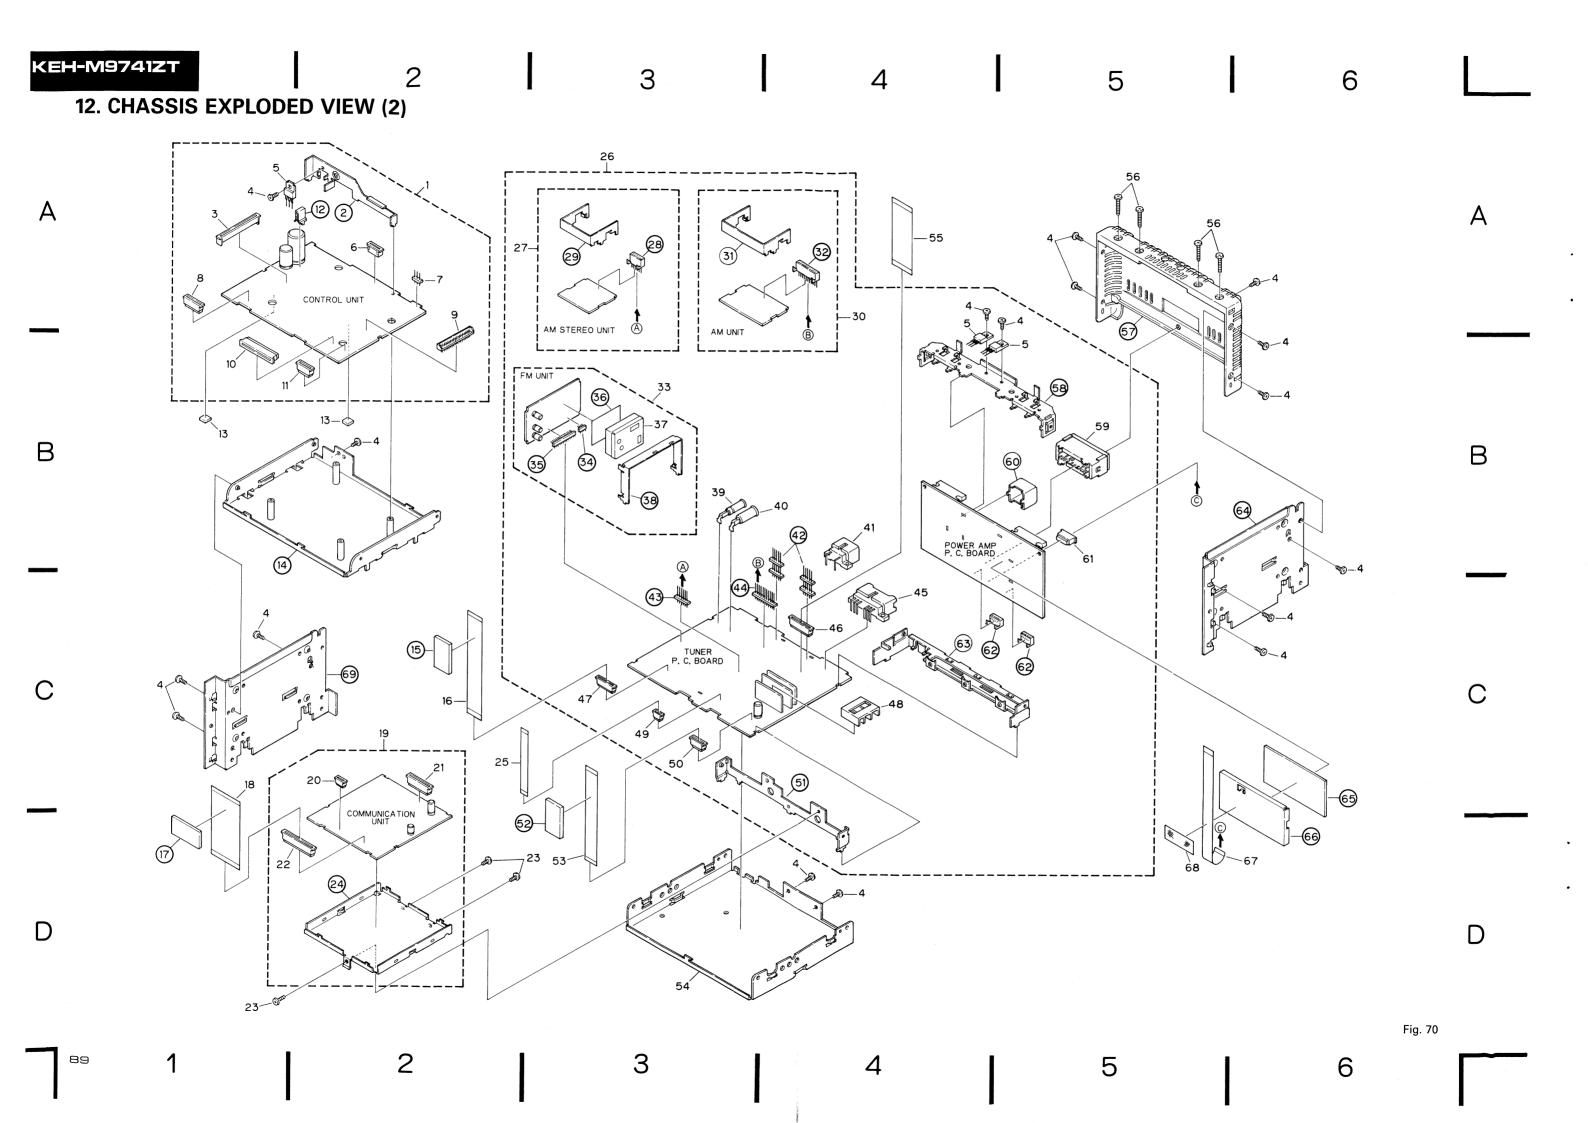

- For your parts Stock Control, the fast moving items are indicated with the marks ‡‡ and ‡.
  - # : GENERALLY MOVES FASTER THAN \*.

This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

- Parts whose parts numbers are omitted are subject to being not supplied.
- Parts marked by "" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

# 14. ELECTRICAL PARTS LIST

### NOTE:

95

- For your parts Stock Control, the fast moving items are indicated with the marks ## and #.
  - ## : GENERALLY MOVES FASTER THAN \*.

This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

- Parts whose parts numbers are omitted are subject to being not supplied.
- The part numbers shown below indicate chip components.

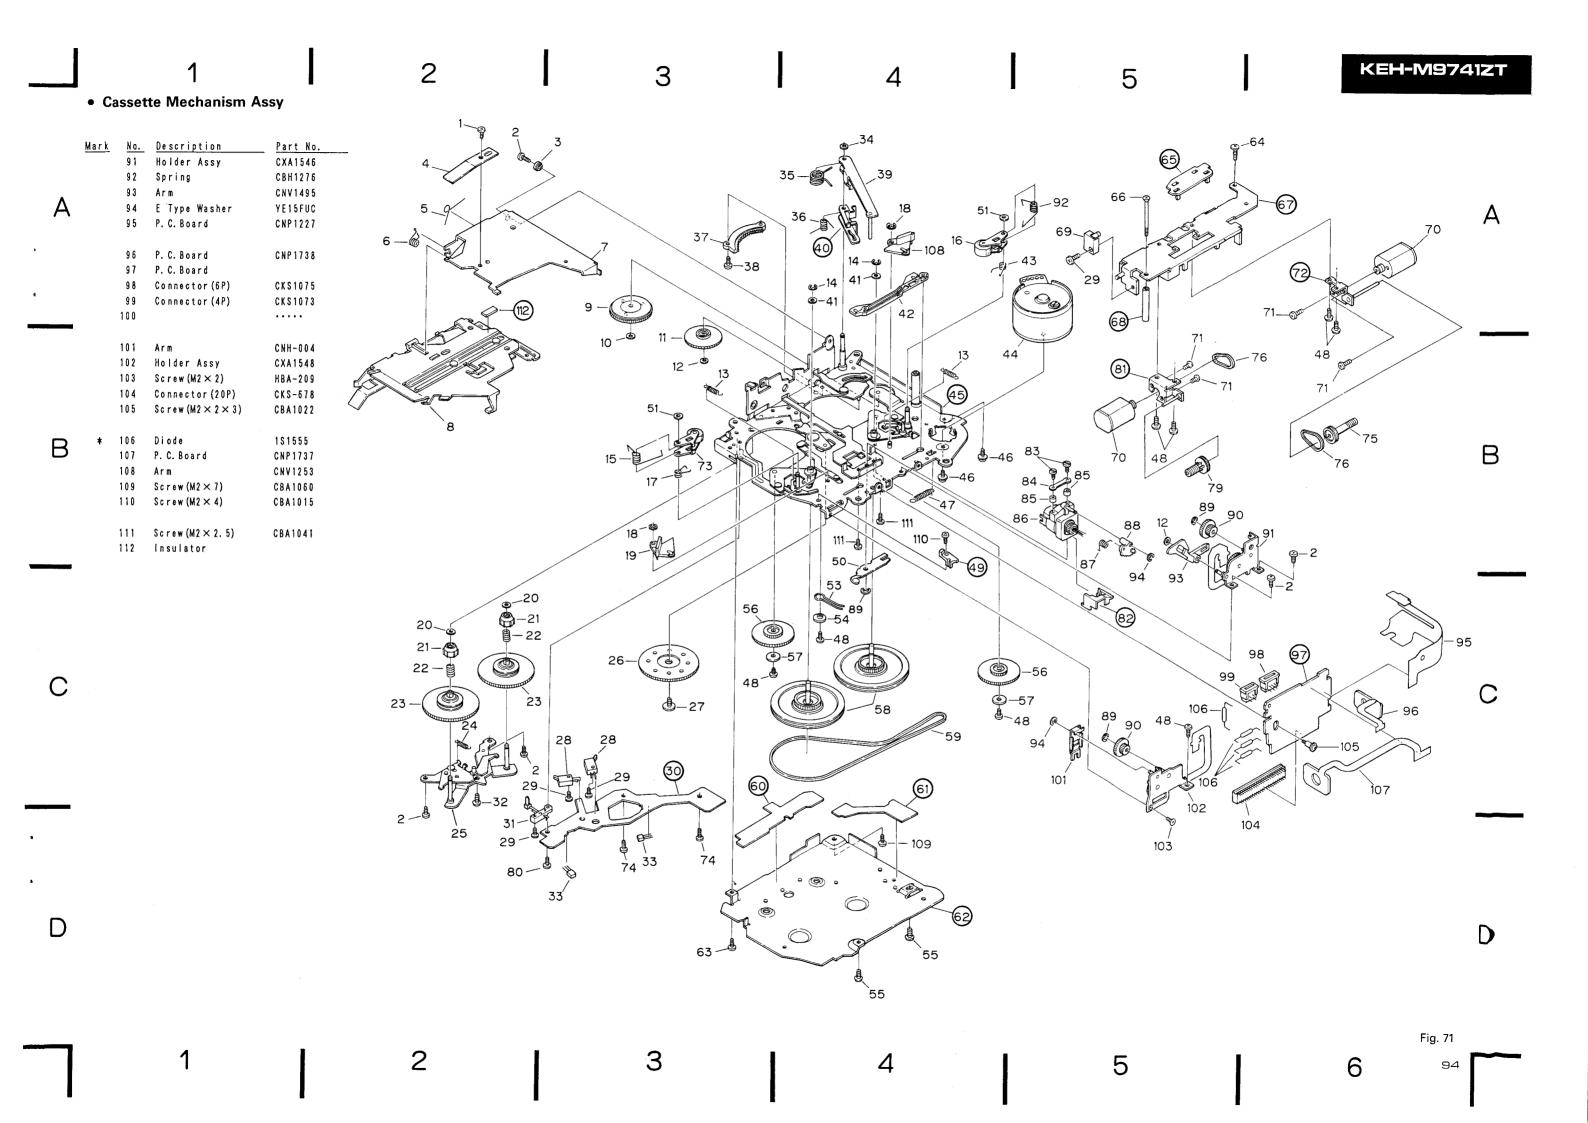

Chip Resistor
